

Jordan River Noxious Weeds

Leafy spurge

Key Features:

- **Caution!! Contains a caustic latex sap that can result in skin irritation, redness, swelling, and blisters.**
- Yellowish green flowers surrounded by bracts.
- Grows 3 feet tall, the root system can grow 26 ft deep!

Puncturevine

Key Features:

- **Caution!! The hard, spiky seed case can injure livestock, people, and pets when stepped on and can puncture bicycle and car tires.**
- Yellow, five petaled flowers.
- Annual forming dense mats reaching 2-5 ft in diameter.

Hoary cress

Key Features:

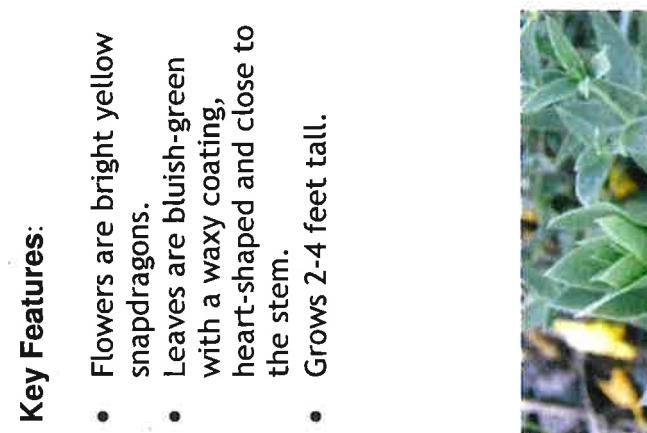

- White flowers with four petals, giving the plant a flat-topped appearance.
- Blue-green leaves that are lance shaped with the upper leaves clasping the stem.
- Control of hoary cress is very difficult because of an extensive root system that can grow up to 50 new plants from one lateral rhizome.

Dalmatian toadflax

Key Features:

- Flowers are bright yellow snapdragons.
- Leaves are bluish-green with a waxy coating, heart-shaped and close to the stem.
- Grows 2-4 feet tall.

Purple loosestrife

Key Features:

- Has long, showy, rose-purple flower spikes.
- Stems are stiff and four-sided.
- Has erect stems, often growing 6 to 10 feet tall
- Usually associated with moist or marshy areas

Dyers woad

Key Features:

- Bright yellow with four petals.
- Bluish green leaves with a cream colored mid rib.
- It is important to remove pulled plants from the area if they have started to go to seed. Seed development may still continue even if the plant has been pulled.
